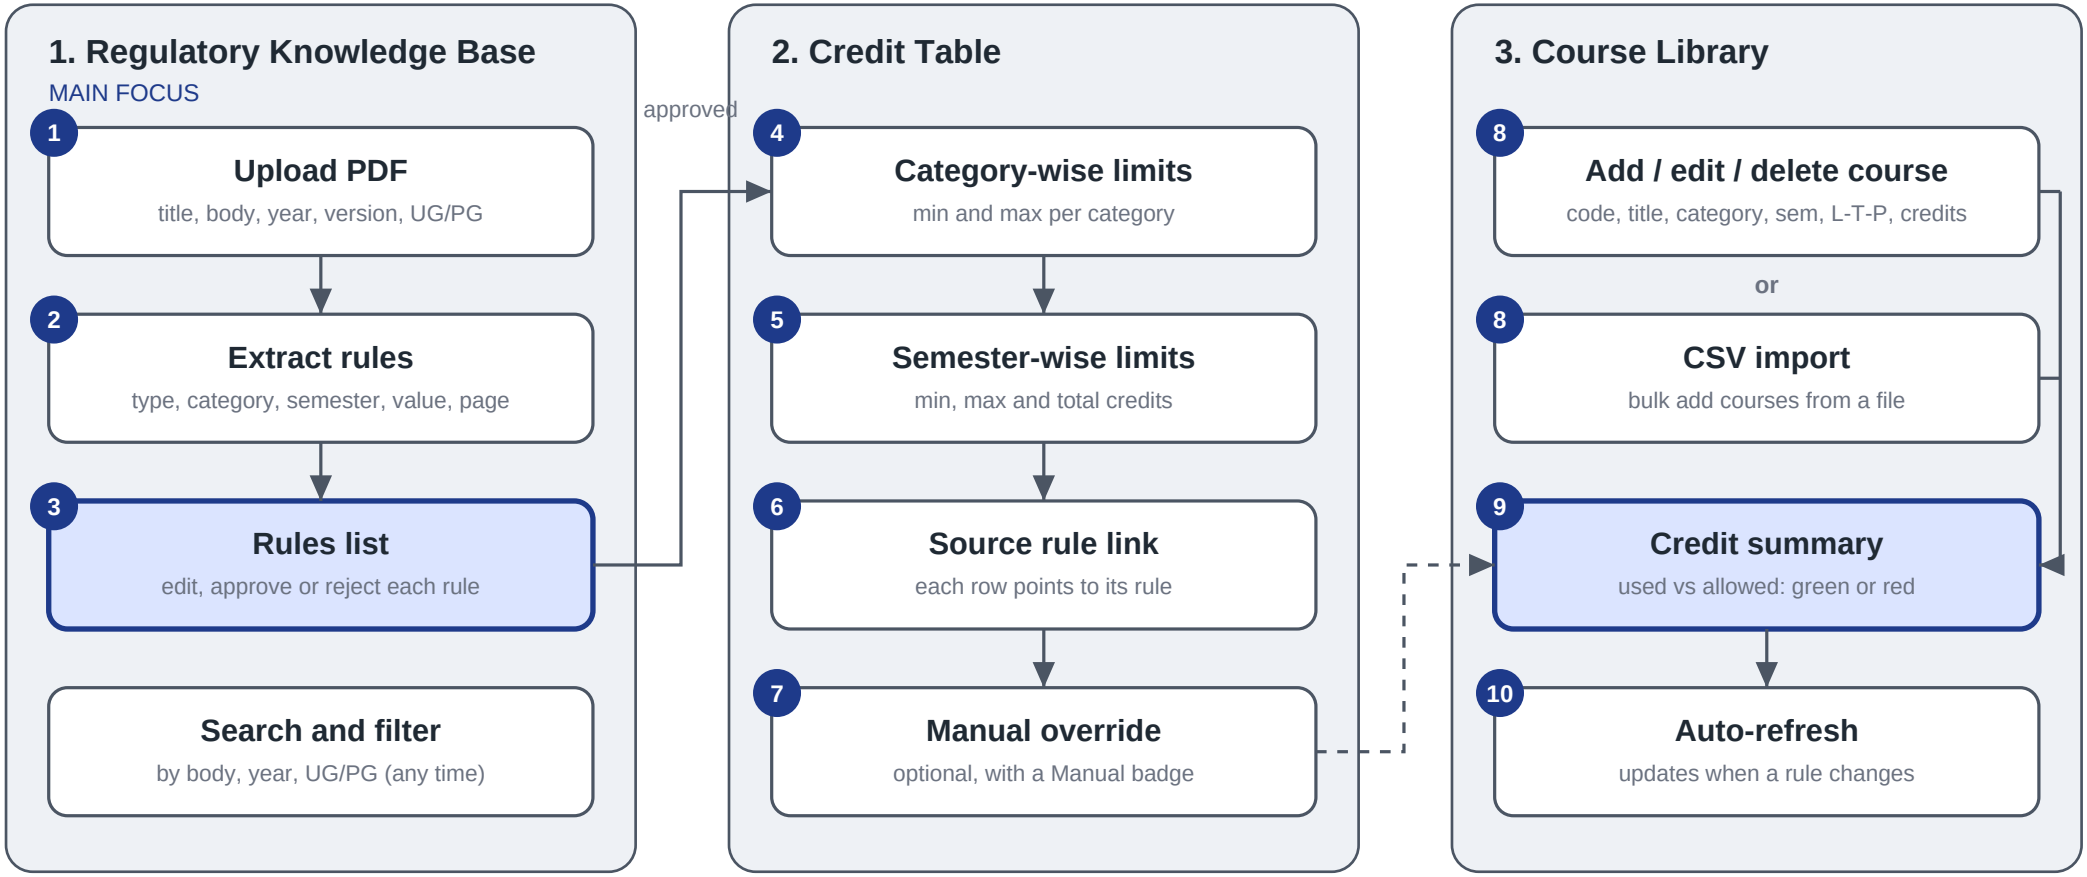
Regulatory Knowledge Base - 3 Page Flow

Rules come from the regulation PDF, become credit limits, and then check every course in the Course Library.



How to read it

Follow the numbers 1 to 10. Solid arrows: the next step. Only approved rules (step 3) move on to the Credit Table.

Dashed arrow: the final Credit Table limits feed the Credit summary (step 9). A rule change refreshes it automatically (step 10).

Clear explanation

Page	What it does	Connects to
1. Regulatory Knowledge Base	Upload a regulation PDF with title, issuing body, year, version and UG/PG. The system extracts draft rules (type, category, semester, value, source page). You edit, approve or reject each rule. Search and filter by body, year and UG/PG.	Approved rules go to the Credit Table.
2. Credit Table	Shows category-wise min/max credits (Basic Science, Core, Elective, Project, etc.), semester-wise min/max credits and total credits. Every row links to its source rule. A manual override is allowed and shows a Manual badge.	Its limits are used by the Course Library credit summary.
3. Course Library	Add, edit and delete courses (code, title, category, semester, L-T-P, credits), or import them from a CSV file. The credit summary compares used credits with allowed credits per category: green is within the limit, red is outside it.	Updates automatically when a rule changes.

Flow in words

1. Upload a regulation PDF with title, issuing body, year, version and UG/PG.
2. Extract rules: the system creates draft rules (type, category, semester, value, source page).
3. Rules list: edit, approve or reject each rule. Only approved rules move forward. Search and filter can be used any time.
4. Credit Table, category-wise limits: min and max credits per category fill from approved rules.
5. Credit Table, semester-wise limits: min, max and total credits fill from approved rules.
6. Source rule link: every row points to the rule it came from.
7. Manual override (optional): change a value by hand, it shows a Manual badge.
8. Course Library: add, edit or delete courses, or import them from a CSV file.
9. Credit summary: used credits vs allowed credits per category, green is OK and red needs a fix.
10. Auto-refresh: if a rule changes, the Credit Table and the credit summary update, so green and red update too.
